

NAME

compress – compress files to the HAF (Huffman Archive Format)

SYNOPSIS

compress file

DESCRIPTION

compress will open file as a binary file and generate a new HAF file from it. A companion program, decompress(1), will extract such HAF files.

ARGUMENTS

file

Path of the file to compress. Any file is allowed (even empty or binary ones).

EXAMPLES

To use compress to generate the file test.txt.hf in the current directory from the file data/test.txt :

```
compress data/test.txt
```

ERRORS

This program will fail if the file passed as an argument does not exist on the file system.
